

Abstract

The present invention relates to a seal for a pulley (1) on a roller bearing. For this purpose a sealing cap (19a), which covers the front face of the roller bearing (2) and is connected to a hub (9), externally enclosing the roller bearing (2), is externally assigned to the roller bearing (2). On the opposite side the roller bearing (2) has a sealing plate (24a), which is likewise fixed to the hub (9) and on the inner side interacts with a cylindrical section (27) of the fixed housing (5).
